

State Project No. 713-20-0117
1st Street Bridge In Chataignier
Evangeline Parish
(Estimated Construction Cost: \$212,18150)

The existing structure was structurally deficient at the time of programming in 2002; the Parish has performed some temporary repairs subsequent to that date to keep it open to light traffic. The structure has a posted load of 10-15 tons.

This structure services the rural community of Chataignier by shortening their north-south travel length and can make a contribution to the oil & gas service industry working gas fields.

Above all, this type of project assists small contractors in meeting equipment loan payments and payroll overhead costs.
